A smart assistant that acts proactively - a smart companion!

geni:OS runs purely embedded, in the cloud and in hybrid mode ensuring all data stays inside your system, thus preserving your data sovereignty.

- Java-based modular platform for natural-language interactions
- Simplified dialog design by use of a task-based approach parting from fixed interaction sequences
- Comprehensive data abstraction by use of ontologies and storage on a semantic blackboard
- Combines heterogeneous data from sensors, machine learning, external services, and user context
- Arbitrary touchpoints can be connected via REST-interface
- An automotive grade platform supporting Linux x86/ARM, QNX, Android, Windows, etc.
